ABSTRACT:

PURPOSE: To make it possible to set up the reservation of the succeeding multipolling immediately after the start of multipolling in a facsimile(FAX) equipment.

CONSTITUTION: The FAX equipment is provided with an abbreviated dialing memory 11a for allocating an other party FAX number to an abbreviated number, grouping the number and registering the grouped number, a polling setting memory 11b for storing a multipolling reception start date and time and a group number and a signal processing part 10 for releasing the memory 11b immediately

after the start of multipolling reception and executing the input processing of the succeeding multipolling start date and time and the group number in parallel with polling reception processing.
